DhaneKula Institute of Engineering and Technology has organized “A two-Week Certification program on” Open CV “for II year B. Tech CSE students by the Resource Pearson Mr.R.Phani Kishore. Open CV is a great tool for image processing and performing computer vision tasks. It is an open-source library that can be used to perform tasks like face detection, objection tracking, landmark detection, and much more .Total 209 students were participated in this program.

### **Objective:**

- Open CV was built to provide a common infrastructure for computer vision applications.
- Open CV provides functions for reading and writing images and videos in various formats, Capture and save videos.
- Image processing such as filtering and transformation.
- Feature detection.
- Video or image objects detection such as human body parts, cars, signage, etc.
- Video analysis.

### **Leaning Outcomes:**

- Open CV can provide you with a range of skills and knowledge related to computer vision and image processing.
- Understand the basics of image processing, including techniques such as blurring, sharpening, thresholding, and edge detection.
- Learn fundamental concepts in computer vision, such as feature detection, image segmentation, and object recognition.
- Gain proficiency in applying various filters and transformations to images, including smoothing, resizing, rotation, and perspective transformations.

- Learn how to use pre-trained models and train your own models for object detection tasks. OpenCV provides tools for object detection using techniques like Haar cascades and deep learning models.
- Learn how to process and analyze video streams, including tasks such as motion detection, tracking, and background subtraction.

This Course is Very useful to the students and their feedback is positive. The management and Dr.K.Ravi Garu, Principal of Dhanekula Institute of Engineering and Technology thanked the Resource Person and Participants for making the program successful.

DhaneKula Institute of Engineering & Technology, Ganguru, organized two-week certificate program on “Deep Learning for AI” for B.Tech IV Students by the Resource Person Mr. K. Sandeep, Associate Professor, Department of CSE.

#### **Objectives:**

Deep learning is a subset of machine learning that focuses on neural networks with multiple layers (deep neural networks). The objectives of deep learning in the context of artificial intelligence (AI) are broad and include:

- **Feature Representation Learning**
- **Pattern Recognition and Classification**
- **Prediction and Regression**
- **Anomaly Detection**
- **Natural Language Understanding and Generation**
- **Reinforcement Learning**
- **Transfer Learning**

These objectives collectively contribute to the overarching goal of developing intelligent systems that can learn from data and perform complex tasks without explicit programming.

#### **Learning Outcomes:**

The learning outcomes of deep learning for AI encompass a range of capabilities and skills that individuals or systems acquire through the training and application of deep neural networks. Here are some key learning outcomes:

- Deep learning models become adept at extracting relevant features from raw data, eliminating the need for manual feature engineering

- Deep learning models develop the ability to make precise predictions in regression tasks, contributing to applications like forecasting and prediction.
- Capability to identify unusual patterns or outliers in data.
- Capability to identify unusual patterns or outliers in data.
- Ability to make decisions through trial and error in dynamic environments.
- Skill in leveraging knowledge from one task to improve performance on related tasks.

Dhanekula Institute of Engineering & Technology has organized “A Two-Week Certification Program” for II year B. Tech students from 29-11-2021 to 11-12-2021. A total of 127 students were participated in this program. This course is very useful to students and their feedback is positive.
